

Configure Single Sign-On

Step 4: Configure SAML Attributes

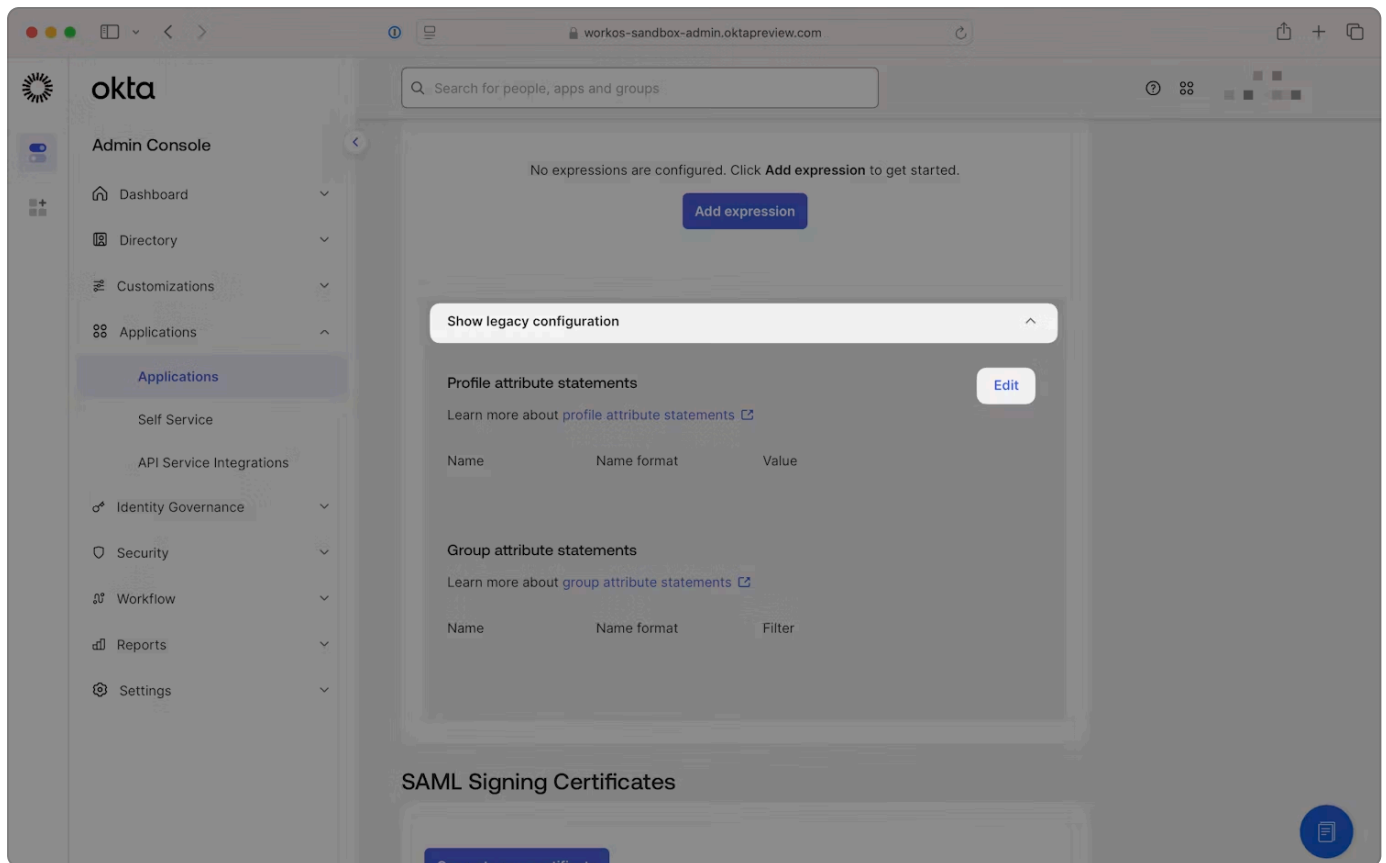

⚠ Your organization must have a verified domain in order to activate Single Sign-On. Please reach out to Cursor if you need assistance.

Depending on which features have been enabled on your Okta instance, SAML attribute configuration can be located in different areas of the Okta admin console.

On the application settings page, ensure that the **Sign On** tab is selected.

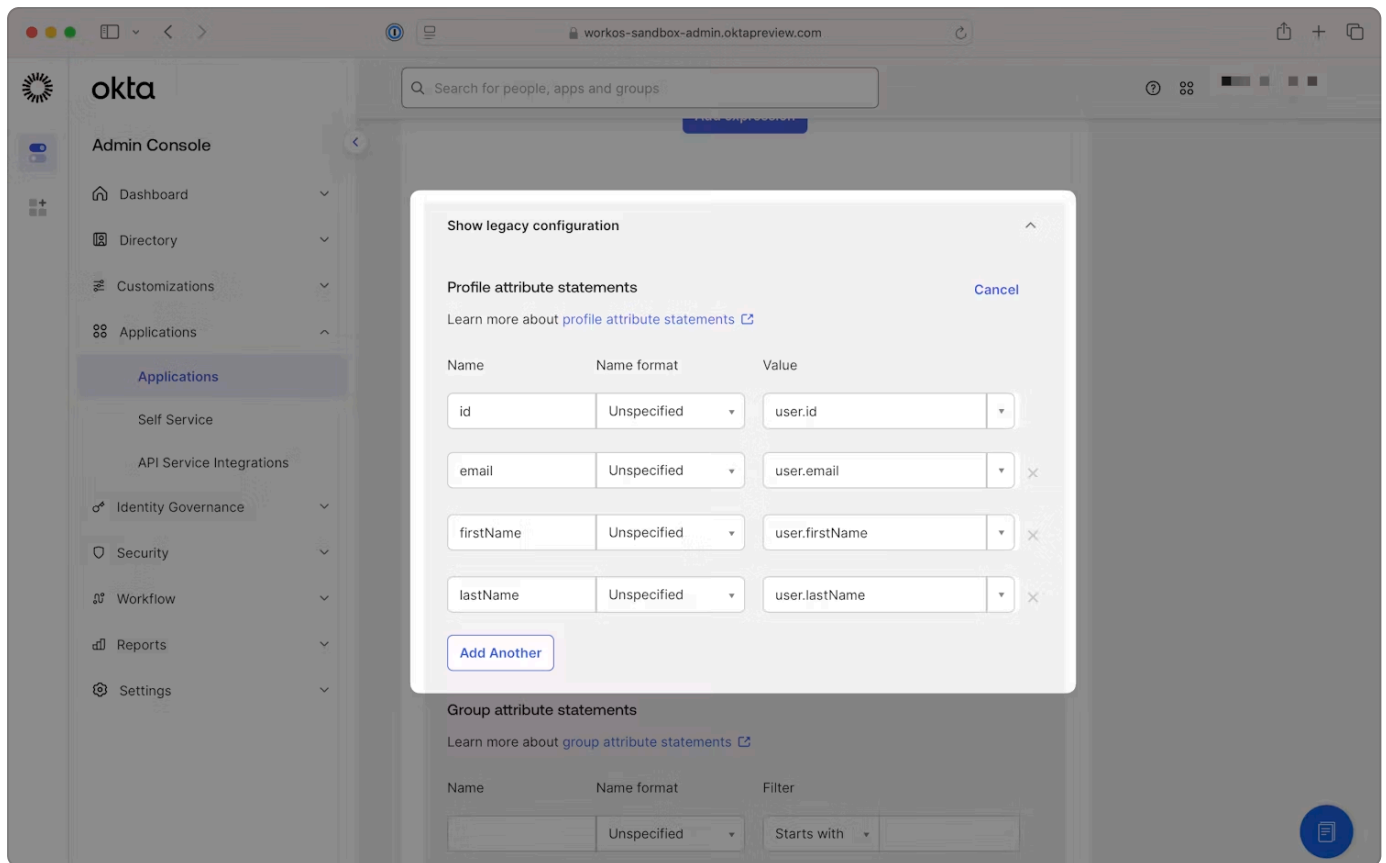

Click **Show legacy configuration** to expand the legacy configuration mapping and then click **Edit**.

Create the following attribute mapping statements:

Name		Value	
id	Required	→	user.id
email	Required	→	user.email
firstName		→	user.firstName
lastName		→	user.lastName

In the end, it should look like this:

Click **Save**.

I've configured SAML attributes
